

Biourinex felis

Capsules for cats to support the function of lower urinary tract

Supplementary food for cats

Typically, the first sign of problems with the cat's urinary system noticed by the owner is urination outside the litter tray. The cat may as well use the litter tray, but the urination is shorter, the animal stops the activity, changes the place, tries again, or just the opposite: the cat crouches and sits in this position for a very long time. These signs may indicate

tenderness during the urine output. Other symptoms which should worry every cat owner, is pink colour of urine indicating the presence of blood, loss of appetite and changes in behaviour. These should not be neglected, but promptly consulted with a veterinarian, who will find the cause of such symptoms and will give further instructions.

For problems with the urinary system

Bioimmunex felis is recommended for cats:

- with infections of the lower urinary tract
- treated for urinary tract stones,
- after surgical removal of urinary stones.
